

IAM South West Committee

Following a request to branch members for expressions of interest in taking up available committee roles, we are pleased to introduce the first SW branch committee.

Branch Chair - Ray Galeozie

I am an ex Royal Navy Weapon Engineer who specialises in developing maintenance strategies and approaches. I actively supported the development of the IAM's Reliability Engineering SSG and was invited to stand up the SW Branch of the IAM which led to the inaugural event being held in April of this year. I am excited that we have been able to form a committee with a varied level of knowledge and experience in asset management that will take this branch forward and for our branch to be an active participant within IAM UK.

Vice chair – Clive Seaton

I have been looking after physical assets for more than 38 years now, whether in the Defence, Rail, Nuclear or Utilities domains, and I have wide experience across The Asset Management Landscape subjects and principles. More recently, I have specialised in engineering risk management techniques, including risk-based maintenance and am a recognised UK Expert in Reliability Centred Maintenance (RCM) representing the BSI on the development of international Dependability standards. I am pleased to have been recently awarded the IAM Diploma and very much looking forward to supporting this new IAM SW Branch.

Secretary – Andrew McArthur

I have been fortunate enough to have worked with some of the UK's largest infrastructure organisations in the Water, Transport and Energy sectors. In doing this, I have gained wide ranging experience across the Asset Management Landscape subjects and successfully led many ISO55001:2014 asset management system design, build and implementation projects. I am delighted to have the opportunity to apply this experience, along with my wider UK and European Standards and Technical Secretariat track record, in my role with the IAM SW Branch Committee. I look forward to supporting the SW Branch in developing a strong local network of asset management professionals

Communications - Wendy Staden

I am a chartered civil engineer, with 30+ years of working in the UK and internationally. I have worked across regulated infrastructure sectors on asset design, construction, operations and maintenance. Most of my more recent career has been spent in the water sector as a consultant and then within a water company. I have been responsible for asset management at a strategic level and for tactical operational level water production asset planning. I currently work in Highways, in asset and environmental performance management. I'm looking forward to supporting the development of the IAM SW branch network.

Programme - Ryan Miszka

I am a civil engineer and found my calling in asset management early in my career. Before moving to the southwest, I worked for several years providing strategic, tactical and operational infrastructure asset management consultancy services for water companies and local and district municipalities in southern Africa. These services concerned clients across the spectrum of asset management maturity and a variety of asset portfolios. Since moving to the South West, I have been working primarily with water companies in an asset planning capacity. I have been eagerly awaiting the formation of the SW branch since moving here and am excited at the prospect of supporting a local contribution within the IAM and raising the profile of the asset management profession as a whole.

Support - Steve Jones

I have been managing infrastructure assets for nearly 30 years and implemented asset management systems, strategies and techniques across a wide range of disciplines, predominately focusing on highways infrastructure and structures asset management and delivery at a strategic level. I have specialised in delivering Operational and Maintenance, capital delivery and risk-based approaches to UK highway authorities and international clients. I have led PAS 55 and ISO 55000 accreditation projects and highways asset management maturity assessments in accordance with the Code of Practice and have supported the IAM in developing the O&M SSG including CIRIA publications in Transport Asset Management. I have been a member of the IAM since 2006 and look forward to supporting the IAM SW committee and its future success.

Support - Phil Wiltshire

As a chartered mechanical engineer, I have worked in the water sector for some 30 years, the majority with consultancies, but also had periods with utilities and contractors. In the last 10 years, I have increasingly moved away from design into asset management. I have focused on operational asset management implementing new low energy treatment processes; new plant automation & control technologies and asset condition surveys in order to implement risk-based prioritisation tools. I also work at strategic levels most recently assisting a client deliver their energy 2050 vision and strategy. I have started on the IAM Diploma Course and keen to see the SW Branch flourish.
